Pramit Patel

Dawsonville, GA | pramittejaspatel@icloud.com | LinkedIn | GitHub

SUMMARY

Computer Science student specializing in AI, machine learning, and data science, with hands-on experience building predictive models, engineering data pipelines, and running end-to-end ML experiments. Focused on applying statistical insight and modern algorithm design to real-world problems.

EDUCATION

University of North Georgia Dahlonega, GA
B.S. in Computer Science, Minor in Machine Learning | GPA: 4.0/4.0 | 65+ credit hours completed *May 2028*

SKILLS

Machine Learning & AI: PyTorch, TensorFlow, Scikit-learn, Feature Engineering, Model Training & Evaluation
Data: Pandas, NumPy, Snowflake, Data Cleaning, Exploratory Data Analysis (EDA), Matplotlib, Seaborn
Programming & Web: Python, Java, SQL, TypeScript, React, Next.js, REST APIs, HTML, CSS
Tools & Practices: Git, GitHub, VS Code, Anaconda, Streamlit, Object-Oriented Programming, Data Structures & Algorithms

EXPERIENCE

AI Lab Member October 2026 — Present
University of North Georgia (UNG) — AI Lab *Dahlonega, GA*

- Perform exploratory data analysis on 3+ research datasets and train predictive models in Python with faculty and 5+ lab peers.
- Run 10+ Scikit-learn and PyTorch experiments, comparing classification and regression metrics to pick the best models.
- Document experiment results and take part in weekly peer code reviews to refine data preprocessing and model stability.

Software Engineering Club Member June 2026 — Present
University of North Georgia (UNG) — Software Engineering Club *Dahlonega, GA*

- Solve and optimize 50+ algorithmic problems in Python and Java, analyzing runtime complexity (Big-O) and memory use.
- Join bi-weekly coding sessions on object-oriented design and modular architecture, with peer code reviews.
- Use Git and GitHub on every team project for version control, clean branching, and merge-conflict resolution.

Customer Service Associate March 2025 — Present
RaceTrac *Cumming, GA*

- Process 200+ point-of-sale transactions daily with 99.9% accuracy during peak 8-hour shifts.
- Track and restock 500+ retail items, keeping shelves rotated with zero stockouts.
- Work with 6+ associates per shift to resolve customer questions and keep daily operations running smoothly.

PROJECTS

NeoPapyrus
Python, SQL, Snowflake Cortex AI, Next.js, TypeScript, Llama 3.3 — Hacklonega, October 2026

- Co-built an AI research assistant that answers questions from 17 peer-reviewed medical papers, citing the exact PDF page.
- Engineered a Snowflake pipeline that reads PDFs page by page and splits them into searchable passages for fast search.
- Built a paper-debate feature where an AI model argues two papers, then rules on agreement, recency, and research gaps.

AuraBeat
React, TypeScript, watchOS, Python, ElevenLabs API — Hacklanta II, October 2026

- Developed a watchOS app in 36 hours that captures wrist gestures at 60 Hz and returns haptic feedback synced to live audio.
- Integrated an ElevenLabs voice assistant via a Python backend, with 4 sensory toggles for hearing-impaired users.
- Co-engineered and pitched a working end-to-end prototype to 20+ judges in a field of 250+ student teams.

Car Insurance Claim Prediction
Python, Scikit-learn, Pandas, NumPy, Matplotlib

- Built an end-to-end classification pipeline in Scikit-learn that predicts claim probability from 10,000+ structured records.
- Imputed missing values, one-hot encoded categorical variables, and scaled 15+ features to prepare raw data for modeling.
- Trained a class-weighted Random Forest that reached a 0.85+ ROC-AUC score, validated with precision-recall analysis.

Voice-Activated AI Assistant
Python, OpenAI API, Whisper, Pyttsx3, SoundDevice

- Built a hands-free desktop voice assistant that transcribes live audio with OpenAI's Whisper at under 2-second latency.
- Captured real-time audio at 16 kHz with SoundDevice and set up spoken replies with Pyttsx3 text-to-speech.
- Structured 4 modular Python scripts with custom exception handling for API calls, speech recognition, and responses.
